

Skeleton Resolution

Environment Committee: Global Water and Food Distribution Faced With a Changing Climate

The UN:

1. *Affirms* the importance of educational programs to raise awareness of climate change and its relevance to the global population;
2. *Proclaims* that all citizens should adopt a plant-based diet to cut down on water usage by the livestock industry and food consumption;
3. *Calls upon* the establishment of TRUMP (Technology Research Union for Management and Protection) to research into technologies including but not limited to:
 - a) Innovative agriculture systems which manage rainwater
 - b) Efficient food waste recycling systems
 - c) Drought-resistant crops
 - d) Meat-free alternatives with low water requirement
4. *Urges* the abolishment of private ownership of water resources, to increase water availability for the future;
5. *Encourages* countries with transnational water resources to work together to ensure the implementation of water management strategies;
6. *Suggests* that developed countries should help developing countries meet their water and food demand by:
 - a) Establishing a donation fund that will provide support and provide resources to countries most effected by climate change
 - b) Help finance water conservation technologies
